The laser cladding head is a piece of equipment used in the laser cladding process, which is mainly used for surface modification, repair and enhancement of material properties. Laser cladding focuses the laser beam on the surface of the substrate and sprays cladding materials (such as metal powder or alloy powder) at the same time, so that the powder melts under the heat of the laser and combines with the substrate to form a dense and strong composite layer.

The global Laser Cladding Head market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
