## Abstracts

The global Laser Confocal Raman Spectrometer market size is predicted to grow from US\$ 133 million in 2025 to US\$ 192 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Laser Confocal Raman Spectrometer is a non-destructive spectroscopic analysis technique that uses laser light to illuminate a sample and analyzes the Raman scattering signal of the scattered light to obtain information about the molecular structure and chemical composition of the sample. This instrument offers high spatial resolution, high sensitivity, and non-contact measurement capabilities, making it widely applicable in fields such as materials science, biomedical research, and chemistry.

Raman spectrometers are mainly used in scientific research institutes, physical and chemical laboratories of colleges and universities, biological and medical fields, and other optical fields to study the determination and confirmation of material composition; they can also be used in criminal investigation and jewelry industry for drug detection and gem identification. The instrument is known for its simple structure, easy operation, fast, efficient and accurate measurement, and low wave number measurement capability; it adopts confocal optical path design to obtain higher resolution, and can perform micro-area detection of sample surface at um level, and can also be used for microscopic imaging.

Laser confocal Raman spectrometer is an effective spectral analysis method for analyzing material composition and structure. Its principle is that the incident laser will cause the molecule (or lattice) to vibrate and lose (or gain) part of the energy, causing the scattered light frequency to change. The analysis of scattered light, namely Raman spectroscopy, can detect the composition, structure and relative content of molecules.

Raman spectroscopy is one of the fastest growing parts of spectroscopy. This has become a widely recognized trend in the industry, and it has been particularly evident at the recent Pittcon exhibitions. In the Raman spectroscopy market, imported manufacturers are quite active. In view of the current booming market situation of Raman spectrometers, domestic instrument companies are certainly not willing to lag behind, especially in the field of handheld/portable instruments. In the past few years, the Chinese Raman spectroscopy market seemed to have always been the 'stage' for imported products. In the past two years, the performance of domestic Raman instruments has attracted the attention of many industry insiders.
