The growing demand for improved targeting systems, the global laser designator targeting pods market is booming. Targeting pods are instruments that classify and direct arms towards the assigned target. Precision-guided munitions (PGM), such as laser-guided weaponry, use targeting pods. When a target is identified by a laser designator. A series of coded bursts of laser light are fired; the beam is invisible and does not shine continuously. The laser light signals bounce off the target and into the sky where they are detected by the seeker on the laser-guided munitions, which steers itself towards the reflected signals core.
