A Laser Diameter Measuring Device, also known as a laser diameter gauge or laser micrometer, is an instrument used to measure the diameter of cylindrical or round objects, such as wires, cables, tubes, pipes, and other similar products. It utilizes laser technology to provide accurate and precise measurements of the diameter or thickness of the object being measured.

Laser diameter measuring devices use lasers to scan and measure the diameter of the object. The laser beam is emitted from the device and is directed onto the surface of the object. The device measures the diameter of the object without physically touching it, ensuring non-contact and non-intrusive measurement, which is especially useful for

delicate or sensitive materials. Laser technology provides high accuracy and precision in diameter measurements, enabling precise control of manufacturing processes and ensuring product quality.
