Laser diode gas analyzer is a device that uses a laser diode as a light source to measure the concentration of various gases in a sample. The laser diode emits a narrow beam of light that is tuned to a specific wavelength that corresponds to the absorption spectrum of the target gas. The light passes through the sample and is detected by a photodetector. The amount of light absorbed by the gas is proportional to its concentration. Laser diode gas analyzers can measure gases such as oxygen, carbon monoxide, carbon dioxide, moisture, hydrogen sulfide, hydrogen chloride, ammonia and methane.
