## Abstracts

The global Laser Drilling Machine market size is predicted to grow from US\$ 1352 million in 2025 to US\$ 1880 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

A Laser Drilling Machine is a precision manufacturing system that uses a focused laser beam to create small, high-accuracy holes in materials by melting or vaporizing the target area. Compared with mechanical drilling, laser drilling enables non-contact processing, extremely small hole diameters, high aspect ratios, and minimal mechanical stress, making it widely used in PCB and HDI manufacturing, semiconductor packaging, aerospace components, medical devices, and precision industrial applications. In 2025, global Laser Drilling Machine production reached approximately 3894 units, with an average global market price of around US\$355 k usd per unit. The production capacity for Laser Drilling Machine in 2025 was approximately 4000 units. The typical gross profit margin for Laser Drilling Machine is between 20% and 40%.

The Laser Drilling Machine market is driven by the rapid development of electronics, semiconductor packaging, and advanced manufacturing, where high-precision, high-speed, and non-contact drilling processes are increasingly required. Laser drilling machines are widely used in applications such as HDI PCBs, IC substrates, semiconductor wafers, medical devices, and precision industrial components, enabling micro-hole drilling with superior accuracy and minimal thermal damage. Growth is supported by trends including miniaturization, higher interconnect density, and the adoption of advanced packaging technologies, with Asia-Pacific leading the market due to strong electronics manufacturing capacity, followed by North America and Europe.
