Laser dust monitor is an advanced air quality monitoring device that uses laser technology to measure the concentration of suspended particles in the air. This device can provide high-precision measurement results and is widely used in the fields of industry and environmental protection. The laser dust monitor emits a laser beam, and when the laser beam encounters particles in the air, it will scatter. The instrument determines the concentration and size of the particles by detecting the intensity and distribution of these scattered lights. After processing, this information can be displayed in real time.
