Laser engineering projector is a high-end projection equipment based on laser light source technology, designed for large-scale, high-brightness projection needs. Compared with traditional bulb light source projectors, laser engineering projectors have higher brightness, longer service life, lower energy consumption and more vivid color performance. Laser light sources can provide more stable and more accurate colors, and the color gamut of laser projectors is usually wider than that of traditional bulb light source projectors, which can present richer image details, especially in strong light environments. It can still maintain a clear picture. The service life of laser light sources is generally more than 20,000 hours, which greatly reduces the maintenance cost of equipment.
