A laser floating zone furnace is a vertical zone melting method single crystal growth equipment. The furnace utilizes a laser beam as the heat source to locally create a floating molten zone in a rod - shaped raw material. Under the action of a seed crystal, by precisely controlling parameters such as laser energy and scanning speed, atoms or molecules in the molten zone are arranged in an orderly manner according to a specific lattice structure, thereby growing high - quality single crystals. It is mainly used for growing semiconductors, optical crystals and other materials with extremely high requirements for purity and crystal quality.

United States market for Laser Floating Zone Furnace is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Laser Floating Zone Furnace is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
