The global Laser Foreign Object Removal System market size is predicted to grow from US$ 297 million in 2025 to US$ 531 million in 2032; it is expected to grow at a CAGR of 8.8% from 2026 to 2032.

In 2024, global Laser Foreign Laser Foreign Object Removal System Removal System production reached approximately 1,414 sets, with an average global market price of around US$ 198,000 per set.The gross profit margin of major companies in the industry is between 45% – 65%. Laser Foreign Object Removal System is a high-precision intelligent equipment that uses laser beams to remove foreign objects such as plastic films, dust, and metal debris from the surface of equipment, facilities or products. It integrates laser technology, machine vision, and motion control systems to achieve non-contact, high-efficiency, and precise removal of foreign objects, and is widely used in power grids, photovoltaics, aerospace, semiconductor manufacturing and other fields with strict cleanliness requirements.

Upstream of laser foreign object removal system industry chain: Core materials and components include laser emitters, optical lenses, machine vision cameras, motion control cards, and industrial computers. Key suppliers are mainly international laser device manufacturers and domestic precision component enterprises. Midstream: International manufacturers include IPG Photonics, Trumpf, while domestic ones include Han's Laser, Raycus Fiber Laser, focusing on R&D and production of customized laser foreign object removal systems. Downstream: Applied in power transmission and transformation (power grid line foreign object removal), photovoltaic panel cleaning, semiconductor wafer processing, aerospace component maintenance, etc. End customers focus on laser power stability, removal accuracy (?0.01mm), and equipment anti-interference performance in complex environments.
