A laser frequency comb is a mode-locked laser that is frequency and phase locked. This laser frequency comb laser has strictly equal frequency intervals in the frequency domain, similar to the teeth of a comb. Laser frequency comb is another major breakthrough in the field of laser technology after the advent of ultra-short pulse laser. With the rapid development of optical communication technology, laser frequency comb has attracted more and more scholars' attention due to its wide application in optical arbitrary waveform generation, multi-wavelength ultrashort pulse generation and dense wavelength division multiplexing.

The global Laser Frequency Comb market size is projected to grow from US\$ 45 million in 2023 to US\$ 65 million in 2030; it is expected to grow at a CAGR of 5.4% from 2024 to 2030.
