A laser fume extraction system is a specialized ventilation device designed to capture and filter hazardous fumes and particulates generated during laser cutting, engraving, or marking processes. These systems use high-efficiency particulate air (HEPA) filters, activated carbon filters, or a combination of both to remove harmful contaminants such as volatile organic compounds (VOCs), dust, and microscopic particles from the air. The extraction system ensures a clean and safe working environment by preventing the inhalation of toxic fumes, protecting both equipment and personnel. Additionally, by maintaining air quality, these systems help comply with health and safety regulations and extend the lifespan of laser equipment.

The global Laser Fume Extraction System market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
