The report requires updating with new data and is sent in 48 hours after order is placed.

Laser fume extractors capture hazardous fumes and particulate at the source before entering the operator's breathing zone or soiling the laser system. Fume extraction systems are available in different configurations including exhaust port connection, multiple exhaust port connection, and standalone source capture. Exhaust port connection models mount directly to the laser system with a flame-retardant flexible hose. Multiple exhaust port connection units connect to multiple exhaust ports on one unit, or one port on two or four nearby systems. Standalone source capture fume extractors don't directly mount but stand next to the unit to extract fumes with a flexible arm. These laser fume extractors provide fume and particulate control for laser systems used in industrial, commercial, medical, and laboratory applications.
