Abstracts

The global Laser Guided Forklift market size is predicted to grow from US$ 1337 million in 2025 to US$ 2208 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

In 2024, global Laser Guided Forklift production reached approximately 317,606 units, with an average global market price of around US$ 4,027

per unit.

A laser guided forklift, or Automated Guided Forklift (AGF), uses a laser scanner and reflectors (or beacons) to navigate and perform tasks autonomously, enhancing safety and efficiency in warehouses and distribution centers by precisely placing and retrieving loads without human intervention. These vehicles provide real-time guidance using visible laser lines for accurate fork placement, reducing operational errors and damage to goods. The laser-guided forklift industry chain can be clearly divided into upstream key components and software services, midstream complete machine manufacturing and integration, and downstream, a wide range of applications. Upstream core technologies, such as high-precision lidar, intelligent algorithms, and sensor fusion, are challenging to develop and require high investment, creating high technical barriers and determining the performance ceiling of the complete machine. The system integration capabilities of complete machine manufacturers are crucial. Hardware, software, and business systems (such as WMS and MES) must be seamlessly integrated to achieve the transition from "single-point intelligence" to "global intelligence." The market is currently dominated by international giants (such as Toyota, Dematic, and Kuka), while domestic manufacturers (such as Siasun and CSG) are rapidly developing. Downstream demand is shifting from "standardization" to "customization." For example, new energy battery production requires explosion-proof and corrosion-resistant designs, the semiconductor industry requires dust-free AGVs, and cold chain logistics requires

low-temperature-resistant models. This also places demands on upstream and midstream companies for faster response times and stronger solution capabilities.
