Laser lithotripsy is a medical procedure used to break down and fragment stones in various parts of the body, such as the urinary tract or the gallbladder, using laser technology. A laser lithotripsy machine, often referred to as a laser lithotripter, is the medical device specifically designed for this purpose.

Laser lithotripsy is a relatively safe and effective way to treat certain types of stones in the body without the need for open surgery. It has become a standard procedure for the management of kidney stones, ureteral stones, and other stone-related conditions.

The choice of laser lithotripsy machine and laser type may vary depending on the specific medical setting, the patient's condition, and the size and composition of the stones being treated. These machines are typically operated by trained medical professionals such as urologists, gastroenterologists, or surgeons.
