## Abstracts

The global Laser Metal Cutting Services market size is predicted to grow from US\$ 1337 million in 2025 to US\$ 2013 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

To address the core challenges of traditional metal cutting processes, such as high mold costs, poor processing flexibility, difficulty in achieving complex shapes, and significant material thermal deformation, laser metal cutting services have emerged. Since the breakthrough in industrial laser technology in the 1970s, and with the continuous evolution of CNC systems and automation technologies, this service has evolved from a specialized means of precision machining into a fundamental process in the metal manufacturing industry. Currently, laser metal cutting services have developed into comprehensive processing solutions encompassing multiple technology paths, including CO2 lasers, fiber lasers, and ultrafast lasers, and equipped with high-precision CNC platforms, automated loading and unloading systems, and intelligent scheduling software. These solutions are widely used in automotive parts manufacturing, aerospace structural components, consumer electronics housings, precision machining, and metal art creation. They enable rapid, precise, and flexible cutting of various metal materials such as carbon steel, stainless steel, aluminum alloys, and titanium alloys, significantly improving processing efficiency and material utilization, reducing production costs, and supporting the high-quality realization of complex designs.
