A laser micro projector is a portable device that uses a laser light source and a micro display chip to project images or videos onto a curtain or wall. The laser micro projector has the following characteristics: high brightness, high color reproduction, high contrast, and clear and sharp pictures. The light source has a long life, no need to replace the bulb, energy saving, and maintenance-free. It has strong light resistance and is not afraid of interference from ambient light, making it suitable for various occasions. Small size, light weight, easy to carry, projection anywhere and anytime. Supports wireless sharing of screens, turning a small screen into a large screen, making it easy to share videos, games, documents and other content. It adopts the principle of diffuse reflection imaging to reduce the damage of blue light to the eyes, making it green and healthy. The application scenarios of laser micro projectors include home theater, business education, culture and entertainment, vehicle display, AR/VR display, etc. The price of laser micro-projection machines generally ranges from a few thousand yuan to tens of thousands of yuan, depending on different brands, performance, functions, resolution and other factors.
