A laser mold cleaning machine is a specialized device used for removing contaminants, residues, and surface coatings from molds and tooling equipment in various industries. Instead of traditional methods like abrasive blasting or chemical cleaning, laser technology is employed to precisely remove unwanted materials from the surface of molds without causing damage to the underlying substrate. The machine emits a high-energy laser beam that interacts with the contaminants on the mold surface, causing them to evaporate or sublime, leaving behind a clean surface. Laser mold cleaning machines offer advantages such as non-contact cleaning, minimal waste generation, reduced downtime, and the ability to clean intricate or delicate molds with high precision. They are commonly used in industries such as manufacturing, automotive, aerospace, and plastics to maintain mold quality, improve production efficiency, and prolong equipment lifespan.

The global Laser Mold Cleaning Machine market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
