## Abstracts

The global Laser Ophthalmic Treatment Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Laser ophthalmology treatment machines are usually composed of electric light sources, lasers (such as Nd:YAG lasers), semiconductor aiming lasers, power supplies, and controllers. Some models also need to be used with a dedicated slit lamp microscope to achieve more precise eye treatment.

The device uses the high-energy focusing properties of lasers to accurately focus laser energy on eye tissues. Through laser cutting, engraving, thermal coagulation and other treatments, eye tissues can be precisely adjusted and repaired. At the same time, the pulse effect of the laser can also produce photolysis/photoblasting effects on human tissues, thereby achieving incision and removal of anterior segment tissues.
