Laser optical thickness gauge is designed for measuring metals and any other material, that are processed in coil, sheet, or strip form. It provides fast and reliable non-contact laser thickness measurements and improves product quality and optimizes the production process. In-line system analyzes thickness of materials in production and automatically controls thickness and evenness with scanned data. Off-line system is used to measure the thickness of samples at the laboratory.

Thickness gauge has a long history of development, from the initial destructive thickness gauge to the current non-destructive thickness gauge as the leading product. In recent years, thickness gauge has developed from mechanical product to digital thickness measurement product. The downstream of laser thickness gauge is very wide, industrial and automotive, chemical industry, electronic and metals, aerospace and marine etc. are all her target users' industry.
