The laser printer heating fuser is a critical part of any laser printer. Using pressure and heat, it fuses the toner powder onto the page to create a print, and without it, the printer cannot operate. Fuser units eventually need to be replaced after frequent use. The fuser melts the toner particles, binding them to the page. The speed at which the paper passes through the fuser is what keeps the paper itself from burning. If the speed were slower, the paper would combust and burn. There is also a thermostat built into the fuser that makes sure heat from the fuser never exceeds a certain temperature.

The global Laser Printer Heating Fuser market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
