The report requires updating with new data and is sent in 48 hours after order is placed.

Laser Probe is a material composition analyzer based on laser induced breakdown spectroscopy. The laser induced breakdown spectroscopy uses a high energy laser to excite the surface of the sample to generate a plasma with high temperature and high electron number density, and ions or atoms that emit light to the plasma. The spectrum is analyzed, and the sample elements are qualitatively and quantitatively analyzed by the wavelength and intensity of the line.
