The global Laser Processing Control Boards market size is predicted to grow from US$ 277 million in 2025 to US$ 386 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

Laser processing control card, referred to as control board, is a circuit board assembly with built-in chips and various electronic components. It is not only the carrier of the program, but also supports seamless connection with the computer through various communication protocols such as PCI, USB, PCIE, TCP/IP, etc. In practical applications, laser processing control cards often work in conjunction with CAD software. The user first uses CAD software on the computer to design the processing requirements, and generates key instruction parameters such as the trajectory and rate of laser processing based on this. Subsequently, these parameters are converted into signals and sent to the control card in the device, which executes them accurately and drives the processing equipment to complete the predetermined operations.

United States market for Laser Processing Control Boards is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
