The global Laser Projection Display Technology (LDT) market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Laser projection display technology (LDT) is a display technology that uses red, green and blue (RGB) three primary color lasers as light sources. This technology projects images onto a specific surface by utilizing the highly focused, monochromatic and orderly arranged characteristics of laser beams. The color gamut coverage of laser display can reach more than 90% of the color space that the human eye can recognize, which is more than twice the color gamut coverage of traditional displays. This enables laser projection display technology to reproduce the rich and bright colors of the objective world most realistically, providing more shocking expression. Compared with the light sources such as incandescent lamps or LEDs used in traditional projectors, laser projection uses lasers as light sources, which can achieve higher brightness and color vividness. Laser projection technology can achieve very large projection sizes without reducing image quality, so it has greater flexibility.

Laser projection technology has continuously made innovations in brightness, color, resolution, etc. Three-color laser projection technology has surpassed monochrome laser projection technology and has become a must-have in the mid-to-high-end projection market. Laser projection technology is also constantly developing in the direction of smaller size and lighter weight to meet the needs of different application scenarios. The application of laser projection technology in high-end cinemas, professional displays and other fields has been relatively mature, and market demand has grown steadily. At the same time, with the continuous development of laser projection technology and the gradual reduction of costs, its application in home

theaters, commercial advertising and other fields has also gradually increased. In summary, the laser projection display technology (LDT) market is continuing to develop rapidly. In the future, laser projection technology is expected to be used in more fields.
