Laser protective eyewear are glasses or goggles used to protect eyes from damage from visible and invisible wavelengths of laser light. They can be similar to goggles or be lenses incorporated into other pieces of protective eyewear. Intrabeam viewing of lasers usually requires protective goggles even with a low power laser.

Laser protective eyewear is used in Medical, Military, Research and Education, and Industrial laser applications. The capabilities and technology of lasers in medical and industrial professions continuously advance as new research is published and improvements are made by laser manufacturers. With these advances in laser technology, laser safety equipment must also progress to satisfy higher standards. Laser safety glasses, goggles, and eye wear can protect the eyes from the hazardous reflected or scattered high powered laser light (radiation).
