Laser quenching service is a processing service that utilizes laser technology to harden the surface of workpieces. By rapidly heating and cooling the workpiece surface with a laser beam, it quickly reaches quenching temperature and achieves rapid cooling, thereby improving the hardness and wear resistance of the surface. With high processing accuracy, controllable hardening layer depth, and minimal impact on the workpiece substrate, Laser quenching service is widely used in automotive parts, molds, tools, gears, and other fields requiring improved surface hardness and wear resistance. This service can not only extend the service life of workpieces but also reduce production and maintenance costs.
