Abstracts

The laser rejector uses the laser beam to act on the target person and the recording equipment, making the irradiated target dizzy for a short time, and then controlling the target and the vehicle. It can also make the recording equipment invalid and unable to take pictures. Regional vigilance and large-scale crowd dispersal are required. The product is equipped with a law enforcement recording function, which can record the entire process of law enforcement, collect fixed evidence in time, and restore the truth of the incident.
