The laser safety interlock system is a control system specifically designed for the safe operation of laser equipment, used to prevent laser radiation from causing harm to operators or the surrounding environment. The system monitors and manages the operating status of laser equipment in real-time through electronic, mechanical, optical, or software means, ensuring that the laser can only be started or operated when specific safety conditions are met. Once a security risk is detected, the system will automatically turn off the laser or prevent it from starting, thereby protecting the safety of personnel and equipment.
