A Laser Scan Micrometer is a precision measurement tool used for non-contact measurement of various objects, typically in industrial settings. It utilizes a laser beam to scan the surface of an object and measures dimensions such as diameter, thickness, or height with very high accuracy. The principle of operation involves the reflection of the laser beam from the object's surface onto a detector, where the position of the reflected beam is analyzed to determine the dimension being measured. These micrometers are often used in quality control, manufacturing processes, and research and development where precise measurements are critical.

The global Laser Scan Micrometer market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
