Laser Scattering Particle Size Distribution Analyzer is a device that uses the principle of light scattering to measure the size and distribution of particles in a sample. The device consists of a laser source, a sample dispersion system, a detector array, and a data analysis software. The device illuminates the sample with a laser beam and measures the intensity and angle of the light scattered by the particles. The data is then processed by the software to calculate the particle size distribution using mathematical models such as Mie theory or Fraunhofer approximation. The device can measure particles

ranging from nanometers to millimeters in various types of samples, such as powders, suspensions, emulsions, aerosols, etc.
