The global Laser Trimming Machine market size is predicted to grow from US\$ 269 million in 2024 to US\$ 347 million in 2030; it is expected to grow at a CAGR of 4.4% from 2024 to 2030.

Laser Trimming Machine is to position an extremely fine laser beam on a thin film or thick film resistor, cut the resistor according to a preset computer program, and change the resistance value of the resistor by changing the cross-sectional area of the resistor. While laser cutting the resistor, the resistance value is measured in real time through a high-speed measurement system to bring the resistance value close to the target resistance value. When the resistance value reaches the target resistance value, the laser beam is turned off, thereby achieving precise fine-tuning of the resistance.

Laser resistance trimming machines play a vital role in the manufacturing of resistors and other chip components. The downstream applications of these chip components are extremely wide and cover many industry fields. In recent years, thanks to the rapid development of the Internet of Things, smart wearable devices and smart equipment, the chip component market has shown a good trend of stable growth. What is even more significant is that the chip component manufacturing industry has experienced an industrial transfer from developed countries in Europe and the United States to developing countries such as China. This trend has further promoted the prosperity and development of related industries. The downstream customers of laser trimming are mainly resistor manufacturers, such as Yageo, Walsin Technology, UNI ROYAL, TAI TECHNOLOGY, EVER OHMS, Viking, LIZ in Taiwan; Panasonic, KOA, Susumu, etc. in Japan.

Globally, the main laser resistor trimming machine companies include ESI, Laser Tek, Inseto, Towa Laserfront, Changchun Guanghua, etc. Compared with international leading companies, Chinese companies still have a certain gap in product accuracy and trimming efficiency. Insufficient laser trimming accuracy will lead to inaccurate adjustment of resistance values, which will eventually affect the performance and stability of electronic components.
