The global Laser Warning System market size is predicted to grow from US\$ 595 million in 2025 to US\$ 830 million in 2031; it is expected to grow at a CAGR of 5.7% from 2025 to 2031.

The laser warning system is an instrument that automatically determines abnormal phenomena and states based on the data obtained by the laser sensor observation and pre-determination algorithms. It can identify the existence of the target and its parameters (radiation intensity, wavelength, bandwidth, position, etc.), and finally can alarm in the form of sound, light or data, or directly control the interference of the interference system. Some of these alarm systems can simply detect individual events, and some can detect, identify, and locate multiple threats in a variety of weapons.

Global Laser Warning System key players include UTC, Northrop Grumman, Saab, BAE Systems, Leonardo S.P.A., etc. Global top five manufacturers hold a share over 25%.

North America is the largest market, with a share about 35%, followed by Europe and China, both have a share over 45 percent.

In terms of product, Spectral Recognition LWS is the largest segment, with a share about 100%. And in terms of application, the largest application is Air Force, followed by Ground Force.
