A laser water chiller, also known as a laser cooling system or laser chiller, is a specialized cooling device designed to regulate and maintain the temperature of laser equipment, particularly the laser source or laser resonator. Laser systems, whether used for cutting, engraving, welding, medical procedures, or scientific applications, generate a significant amount of heat during operation. This heat can adversely affect the performance, stability, and longevity of the laser components. A laser water chiller plays a critical role in managing and dissipating this excess heat, ensuring that the laser operates within its optimal temperature range.
