Laser water level meter is a device that uses laser ranging technology to measure water level height. It accurately calculates water level changes by emitting laser to the water surface and receiving reflected signals. The device has the advantages of high precision, non-contact measurement, and real-time monitoring. It is suitable for water level monitoring of natural water bodies such as rivers, lakes, reservoirs, and wells, as well as industrial water storage facilities and municipal drainage systems. Due to its strong adaptability to the environment, low maintenance cost, and easy installation, it is widely used in hydrological monitoring, flood prevention and early warning, industrial production, and agricultural irrigation. It is an important tool for modern water level measurement.
