The global Laser Welding and Cutting Robots market size is predicted to grow from US\$ 674 million in 2025 to US\$ 1145 million in 2031; it is expected to grow at a CAGR of 9.2% from 2025 to 2031.

Laser welding is a welding technique used to join pieces of metal or thermoplastics through the use of a laser. The beam provides a concentrated heat source, allowing for narrow, deep welds and high welding rates. Laser cutting is a technology that uses a laser to slice materials. Laser cutting works by directing the output of a high-power laser most commonly through optics.

Laser welding and cutting is inherently more precise than traditional welding and cutting.

The market is really concentrated. Top 3 manufacturers took 66% market share in 2019.
