Laser wire marking systems are devices or setups that utilize laser technology to mark wires with various types of information. These systems consist of several key components working together to achieve precise and permanent markings on the wire surface. Laser source is the core component that generates the laser beam. Different types of laser sources, such as fiber lasers, CO? lasers, or Nd:YAG lasers, are used depending on the material of the wire and the marking requirements. The laser source emits a high - energy beam of light with specific wavelengths and power levels. Optical system includes lenses, mirrors, and beam expanders that are used to shape, focus, and direct the laser beam onto the wire surface. The optical system ensures that the laser beam is precisely focused to achieve the desired marking resolution and depth.
