Latanoprost is a medication primarily used to treat open-angle glaucoma, a condition where there is increased pressure inside the eye due to fluid buildup. However, chronic angle-closure glaucoma (CACG) is a different form of glaucoma where the drainage angle of the eye gradually closes over time, leading to elevated eye pressure.

In chronic angle-closure glaucoma, the angle closure is not as sudden or acute as in acute angle-closure glaucoma but develops slowly over time. The treatment approach for chronic angle-closure glaucoma typically involves medications that help reduce intraocular pressure (IOP), such as prostaglandin analogues like latanoprost.

The global Latanoprost for Chronic Angle Closure Glaucoma market size is projected to grow from US\$ 130 million in 2024 to US\$ 148 million in 2030; it is expected to grow at a CAGR of 2.2% from 2024 to 2030.
