The global Lateral Flow POC Reader market size is predicted to grow from US\$ 648 million in 2025 to US\$ 798 million in 2032; it is expected to grow at a CAGR of 3.0% from 2026 to 2032.

Lateral Flow POC Reader is a universal mobile analysis device for the qualitative and quantitative analysis of lateral flow assays, immunological rapid tests for point-of-care diagnostics. The tests can originate in multiple fields of application, such as cancer and heart disease diagnostics or drug screening.

Drivers:

The growth of the lateral flow detection point-of-care (POC) instrument market is primarily driven by the increasing demand for point-of-care diagnostics (POC) and the migration of diagnostic technology to home settings.

1. Increased Demand for Rapid Diagnostics and Point-of-Care Testing (POC)

Driven Factors: Globally, frequent outbreaks of infectious diseases (such as malaria and HIV) and the increase in chronic diseases due to population aging have made rapid and convenient diagnostic solutions extremely urgent. Lateral flow tomography (LDT) testing itself is simple, fast, and inexpensive, while its accompanying reader provides more objective and accurate quantitative or semi-quantitative results, reducing the subjectivity of human interpretation.

2. The Rise of Home Healthcare & Self-testing

Driven Factors: A key growth engine is the trend towards decentralization in diagnostics. More and more patients prefer to receive care and monitoring at home. LDT readers, with their portability and ease of use, have become ideal tools for home self-testing. In Australia, for example, the number of older adults choosing home care increased by 357% in ten years, from 57,000 to 258,000, directly confirming this trend. The widespread availability of home testing kits during the COVID-19 pandemic also significantly boosted market demand for home testing instruments.
