The global Lateral Millimeter Wave Radar market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Side-facing millimeter-wave radar is a millimeter-wave radar installed on both sides of the car. It is used to detect the blind spots of the vehicle and targets on the side and rear, such as other vehicles, pedestrians, bicycles, etc. Side-facing millimeter wave radar can improve driving safety and support vehicle functions such as lane changing, merging, and reversing. Millimeter-wave radar refers to a radar sensor that works in the millimeter-wave frequency band (30-300GHz). It has the characteristics of small size, high resolution, and strong penetration ability. Millimeter wave radar can measure the distance, speed, azimuth and other parameters of the target through different modulation methods and signal processing algorithms. The main application areas of millimeter wave radar include automobile, industry, consumer, medical, etc.
