## Abstracts

According to this study, the global Latex Allergy market size will reach US\$ 2420 million by 2031.

Latex allergy is caused by exposure to substances made of latex (natural rubber). The exposure leads to a person's immune system reaction to harmless protein in such a way as if the proteins are antigens, or disease causing. Antibodies and antihistamines get released in the body as result so as to react to the natural harmless proteins which may cause symptoms such as itchy hands, skin rash, hives, and eczema (cracking of skin). It is commonly caused in people who are exposed to latex based products frequently.

The market for latex allergy is growing due to increase in the prevalence of such allergy giving rise to other diseases such as Asthama, Rhinitis, Anaphylaxis and such others.
