## Abstracts

The global Lattice Generation Software market size is predicted to grow from US$ 362 million in 2025 to US$ 778 million in 2032; it is expected to grow at a CAGR of 11.6% from 2026 to 2032.

Lattice generation software is specialized engineering software for additive manufacturing, advanced structural design, and digital materials engineering. It is used to create, parameterize, edit, optimize, verify, and output three-dimensional lattices, cells, and porous structures. This type of software is typically based on beam elements, truss elements, periodic surfaces, three-period minimal surfaces, Voronoi structures, random foam structures, or hybrid cells. It generates uniform, conformal, gradient, or performance-driven lattices within solid components, surfaces, or specified design domains using implicit functions, distance fields, voxels, graphical structures, finite element meshes, or parametric element libraries. Its key capabilities include control over unit size, rod diameter, wall thickness, porosity, relative density, orientation, connection method, and gradient law, as well as adjusting local structures according to stress, temperature, flow rate, pressure, energy absorption, or biological bone ingrowth requirements.

From a demand structure perspective, aerospace and medical remain the primary paying markets for high-value lattice software because these sectors require significant weight reduction, bone ingrowth, or thermal management benefits and are willing to invest substantial software budgets in simulation, quality traceability, and certification. The footwear and consumer goods markets offer a greater number of designs and faster product iteration speeds, driving the development of cloud-based conformal lattices, automated parameterization, and material-structure joint databases; while the automotive, energy, and industrial equipment markets are more focused on energy

absorption, heat exchange, filtration, and mass production costs. Demand growth will not only come from new software slots, but more importantly, from individual customers upgrading from proof-of-concept to enterprise-level workflows, cloud computing, automated design, and multiphysics verification. The US and Western Europe remain the primary sources of revenue. Applications in the industrial AM, aerospace, medical device, and new energy vehicle sectors in the Chinese market will increase demand for localized software. However, current independent domestic supply remains limited, and in the short term, the market will continue to see competition between international integrated platforms and local AM CAx software.
