The global Lattice Girder Welding Machine market size is predicted to grow from US$ 65.89 million in 2025 to US$ 80.99 million in 2032; it is expected to grow at a CAGR of 3.0% from 2026 to 2032.

Lattice Girder Welding Machine is an advanced manufacturing platform integrating automated machinery and intelligent control systems for efficient and precise continuous production of steel truss products for construction. Through a series of intelligent processes, including automated feeding, bending, welding, assembly, and testing, the machine completes the entire process from raw materials to finished product, significantly improving production efficiency and product consistency while meeting the modern construction industry's demand for high-quality and customized structural components. In 2024, the unit price of the Lattice Girder Welding Machine was approximately $120k, with a gross profit margin of around 30%.

The Lattice Girder Welding Machine's upstream supply chain encompasses the R&D and manufacturing of high-strength steel, automated components, welding systems, and industrial control software. The material properties and reliability of its core components directly determine the overall performance of the equipment. The midstream supply chain is led by the complete machine integrator, who, through mechanical design, process programming, and system integration, transforms the upstream module into an integrated intelligent production unit with precise feeding, bending, welding, and testing capabilities. Downstream applications are deeply embedded in the building industrialization and prefabricated construction system, serving prefabricated component factories, rail transit and other fields. Through automated production lines, standardized steel truss products are continuously output, ultimately promoting the evolution of building structural component production towards
