The global Layer 2 Managed Industrial Ethernet Switches market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Layer 2 Industrial Ethernet Switches are devices that work at Layer 2 (data link layer) of the OSI model. It can identify the MAC address information in the data packet and forward it based on the MAC address. The Layer 2 switch maintains the correspondence between the MAC address and the port by parsing and learning the source MAC of the Ethernet frame (the table that saves the correspondence between the MAC and the port is called the MAC table), and then looks up the MAC table through its destination MAC to decide which port to forward it to. Layer 2 Industrial Ethernet Switches are widely used in industrial automation, monitoring and security systems, Internet of Things applications, power and energy fields, transportation and logistics, and petroleum and chemical industries. They provide reliable data communication and real-time control, enabling efficient operation and automated control of industrial production lines.
