The global LCD Multimeters market size is predicted to grow from US\$ 503 million in 2025 to US\$ 519 million in 2032; it is expected to grow at a CAGR of 3.6% from 2026 to 2032.

In 2025, global LCD multimeter production reached approximately 6421 k units, the average price is 80 usd/unit. An LCD multimeter is an electronic measuring instrument that uses a liquid crystal display (LCD) as its reading window. It converts electrical quantities such as voltage, current, and resistance into digital signals and displays the values.

Its core feature is direct digital reading. Compared to earlier pointer-type multimeters, it offers advantages such as intuitive readings, high accuracy, high input impedance, and high functional integration. Modern LCD multimeters typically also feature automatic range switching, data hold, backlight display, and some basic logic level testing functions, making them one of the most commonly used basic tools in electronic repair, electrical debugging, and laboratories.

Market Concentration and Major Players:

Internationally, the LCD multimeter market is highly concentrated, primarily in developed countries in Europe and America. Large manufacturers include Keysight and Kimo Instruments. Domestically, however, the LCD multimeter market still has significant room for growth.

Manufacturing Process and Market Trends:

The manufacturing of LCD multimeters begins with circuit schematic design and PCB layout. This is followed by the insertion or surface mounting of resistors, capacitors,

integrated circuits, and analog-to-digital converter chips. The LCD screen is then bonded to the motherboard via conductive adhesive strips or flexible cables. After cleaning and functional calibration, it is installed in an injection-molded housing and sealed.

Market trends show a move towards higher precision and security, incorporating Bluetooth or wireless modules for real-time data synchronization and remote diagnostics. Simultaneously, it is increasingly integrating multiple functions such as temperature, frequency, and true RMS measurement, and launching more specialized niche products for specific fields such as new energy power electronics and microelectronics manufacturing.
