Abstracts

The global LCP-based Adhesiveless FCCL market size is predicted to grow from US$ 166 million in 2025 to US$ 255 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

In 2025, global LCP-based Adhesiveless FCCL production reached approximately 1.38 million square meter, with an average global market price of around US$123 per square meter. LCP adhesiveless flexible copper clad laminate (FCCL) is a two-layer adhesiveless FCCL with liquid crystal polymer (LCP) as the insulating layer material. FCCLs are divided into two categories: one is the traditional three-layer flexible copper clad laminate with adhesive (3L-FCCL), and the other is the new adhesiveless two-layer flexible copper clad laminate (2L-FCCL). Adhesiveless FCCL does not use adhesive, which is more environmentally friendly.

LCP-based adhesiveless FCCL is a niche but high-end segment within high-frequency and high-speed flexible circuit materials. Demand is driven more by the need for better signal transmission, low moisture absorption and dimensional stability than by broad replacement of conventional FPC materials. Applications in consumer electronics, RF modules, millimeter-wave radar and high-speed interconnects support a clearer growth path for LCP-FCCL, but processing difficulty, copper bonding control, customer qualification and yield stability limit the number of qualified suppliers and the pace of volume expansion. KURARAY has decided to end production of Vecstar™ FCCL and plans to continue supplying required products for existing business partners until the end of June 2026. This change is likely to push downstream customers to reassess material sourcing and supply security. In the short term, qualification shifts may create supply-demand adjustments; over the medium to long term, multi-source qualification, localization and broader high-frequency adoption will shape competition. Overall, the

market is characterized by high technical barriers, strong customer stickiness and limited price flexibility, with growth depending more on high-frequency application penetration than on capacity expansion alone.
