Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Lead Acid Battery for ESS market.

Energy storage systems (ESS) store surplus electricity and facilitate the use of batteries when the generated electricity is greater than the demand. The surplus power saved in these systems is supplied to the customers when the demand exceeds the supply. Countries are investing heavily in grid infrastructures to overcome the power supply irregularities, and this is expected to drive the growth of the battery market. ESS comprise various technologies, such as pumped-hydro storage systems, flywheels, lead-acid batteries, and advanced batteries (Li-ion).

The lead–acid battery is the oldest type of rechargeable battery. Despite having a very low energy-to-weight ratio and a low energy-to-volume ratio, its ability to supply high surge currentsmeans that the cells have a relatively large power-to-weight ratio. These
