Lead-acid battery acidification treatment service is a process of restoring the acid balance in a lead-acid battery. Over time, the acid in the battery can become

imbalanced due to the accumulation of lead sulfate crystals on the battery plates. This can lead to reduced battery performance and a shorter lifespan.

The acidification treatment service involves adding a special chemical solution to the battery that dissolves the lead sulfate crystals and restores the acid balance. This process can improve the battery's performance and extend its lifespan.

The acidification treatment service is typically performed by a professional battery service provider and is recommended for lead-acid batteries that have been in use for several years or have experienced reduced performance.
