A lead-acid battery electric counterbalanced forklift is an electric forklift that uses a lead-acid battery as its power source. It primarily consists of a power unit, chassis, working equipment, and electrical appliances. The forklift is equipped with lifting forks at the front and a counterweight at the rear. It operates by using the lead-acid battery to drive the motor, which powers the movement of the forklift, including forward and backward motion, as well as the lifting and lowering of the forks. By relying on the vehicle's weight and the counterweight at the rear, it maintains balance and stability during the lifting and transportation of loads, enabling the transfer of goods. This type of forklift has extensive applications in the logistics and warehousing industry.
