The lead frame mold is a specialized mold designed for the precision manufacturing of lead frames, ensuring dimensional accuracy and shape consistency through its exact cavity design and lead positioning holes. Typically made from materials with high hardness and wear resistance to withstand the mechanical stress of repeated high-pressure injection molding processes, the mold features a complex internal structure that includes a cooling system, guiding mechanism, and ejection system. These designs facilitate optimal thermal management and ease of ejection for the produced lead frames. The design and manufacturing of the entire mold demand a high level of precision and craftsmanship to ensure the quality of the final product and production efficiency, meeting the stringent standards of automated assembly lines.
