The global Lead-Free Bullet market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Lead-free bullets are environmentally friendly bullets that replace traditional lead bullets. They use alloys such as copper and tungsten to replace lead. These alternative materials do not produce lead powder and have good ballistic properties, providing stable shooting performance.

The use of lead-free bullets can reduce lead contamination of the environment, protect the health of natural ecosystems, and reduce the risk of human exposure to lead. They are widely used in shooting sports, hunting and military applications.
